PROFESSIONAL SUMMARY

Certified Data Analyst with 3+ years of experience in high-impact manufacturing environments, specializing in **Advanced Planning & Scheduling (APS)** and Business Process Optimization. Expert in leveraging **SQL, Python, Power BI and Predictive Modeling** to transform complex operational datasets into actionable business insights. Proven track record of automating manual workflows reducing processing time from **3 hours to near instantaneous** and architecting **Power BI dashboards** for enterprise-level inventory health. Adept at bridging the gap between supply chain operations and technical data solutions to drive executive decision-making and digital transformation.

SKILLS

- **Data Programming & Analysis:** Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, PL/SQL, Exploratory Data Analysis (EDA), Statistical Modeling.
- **Data Visualization & Reporting:** Power BI (Real-time Dashboards), Microsoft Excel (Advanced: VBA/Macros), Automated Reporting Pipelines.
- **Machine Learning & AI:** Unsupervised Learning (K-Means Clustering), Scikit-Learn, Generative AI, Prompt Engineering, Predictive Analytics.
- **Business Intelligence & Strategy:** Gap Analysis, Requirement Gathering, Supply Chain Optimization, Business Process Analysis, Agile Methodology, cross-functional collaboration
- **Tools & Platforms:** Jupyter Notebook, VS Code, GitHub, Streamlit, API Integration (Yfinance, NSE/BSE).

PROFESSIONAL EXPERIENCE

JSW Steel | Assistant Manager

Bellary, Karnataka, India | June 2022 – Present (3 years+)

- **Data Automation & System Integration:** Architected a Python-based Stream-lit application to systematize inventory synchronization between MES and PSI systems, reducing manual data processing time by 99% (from 3 hours to near-instantaneous).
- **Business Intelligence & Visualization:** Engineered real-time Power BI dashboards providing a holistic enterprise-level view of inventory health, utilizing data visualization to streamline cross-functional operational efficiency.
- **Process Optimization & Gap Analysis:** Spearheaded the Advanced Scheduling & Planning (APS) project by performing end-to-end Gap Analysis on business processes to integrate PSI Metals products with JSW's core business goals.
- **Technical Validation & Quality Assurance:** Orchestrated 100+ **computerized** test cases using Python for Telegram protocol validation during FAT/UAT/SIT phases, ensuring 100% system reliability and data communication accuracy.
- **ETL & Data Integrity:** Mechanized Delta Data Identification and the integration of MES BTR/BTC into PSI systems using Python scripting, enhancing data accuracy for executive decision-making.

KEY PROJECTS

Portfolio Monitoring & Automated ETL System | Python, Yfinance, NSEtools, SMTP, Excel

- **Portfolio Monitoring & ETL System :** Constructed an end-to-end ETL pipeline to **computerize** data ingestion, validation, and real-time price fetching for NSE/BSE stocks.
- **Dynamic Reporting :** Streamlined daily reporting by generating dynamic HTML email alerts, eliminating manual portfolio tracking.
- **Integrated financial APIs** (Yfinance, NSEtools) to enable real-time tracking of market movements, providing investors with actionable data for optimized decision-making.

Main-board IPO Exploratory Data Analysis (EDA) | Python, Pandas, NumPy, Seaborn, Matplotlib

- **Executed end-to-end EDA** on a financial dataset of 387 IPOs, identifying critical risk thresholds (Price >2,000, Issue Size >15k CR) that statistically correlate with negative listing returns.
- **Formulated quantitative benchmarks** for institutional (QIB >80x) and retail (NII >100x) demand to establish a predictive framework for listing-day alpha generation.
- **Synthesized complex financial data** into executive summaries, translating statistical findings into investment strategies

MENTORSHIP

Customer Segmentation & RFM Analysis | Python, Scikit-Learn, K-Means Clustering

- **Deployed Unsupervised Machine Learning** (K-Means) to segment a global customer base into 3 actionable groups based on Recency, Frequency, and Monetary (RFM) behavior.
- **Identified "The Champions" segment** (25.06% of revenue) and the "Volume Driver" segment (67.23% of revenue), providing data-driven recommendations for loyalty programs and win-back campaigns.
- **Optimized marketing ROI** by delivering a comprehensive business report that translated cluster characteristics into targeted growth strategies.

KEY ACHIEVEMENTS

Advanced Planning & Scheduling (APS) Project

- **Process Automation:** Created a Python-based Streamlit application for MES and PSI system synchronization, reducing manual data processing from 3 hours to near-instantaneous execution.
- **Business Intelligence:** Built and deployed real-time **Power BI dashboard** delivering unified visibility into **10+ production lines/work centers**, improving inventory health monitoring, KPI tracking, and cross-functional operational efficiency through interactive visualization.
- **Data Integrity:** Automated **delta data identification** and integration processes using Python scripting across multiple products, reconciling **2 lakh+ records** between **two databases** to significantly enhance data accuracy and reliability for executive-level decision-making
- **Quality Assurance:** Orchestrated **100+ automated test cases** using Python for system protocol validation, accelerating validation cycles and ensuring 100% data communication accuracy

EDUCATION

Velagapudi Ramakrishna Siddhartha Engineering College

Bachelor of Technology (B-Tech) in Mechanical Engineering CGPA: **9.25/10** | Vijayawada | 2018 – 2022

CERTIFICATIONS

- Crash Course on **Python** (Google – Feb 2025)
- **Prompt Engineering** for ChatGPT (Vanderbilt University – Nov 2024)
- **Generative AI:** Foundation Models and Platforms (IBM – Dec 2024)
- **Generative AI:** Prompt Engineering Basics (IBM – Oct 2024)
- Professional Certificate Program in AI and Data Science | UpGrad Campus | 2025 – 2026

ADDITIONAL INFORMATION

- **Technical Versatility:** Proficient in bridging IT, analytics, and supply chain operations by leveraging **Python, SQL, and Generative AI** to drive system optimization and process efficiency.
- **Methodology & Analysis:** Expert in performing **Gap Analysis** and utilizing **Agile Methodology** to translate complex supply chain requirements into technical data solutions.
- **AI Integration:** Actively utilizing **Prompt Engineering** and Generative AI tools to streamline documentation, automate code generation, and unlock data potential within modern supply chains.
